

# **STOP EXPOSURE TO CARCINOGENS**

Working with hazardous substances? Protect yourself and each other! It is easy to remember: **STOP keeps you safe!**

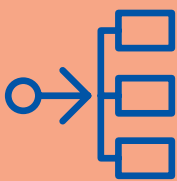

## **S = Substitution**

Replace dangerous substances for safer alternatives. Substitution is always the first measure to consider.

## **T = Technical**

From closed systems to efficient air suction, many techniques drastically reduce exposure to carcinogens. These automated methods ensure safety for everyone.

## **O = Organisational**

Close doors, seal lids, maintain a clean workspace. Ensure everyone cleans up before eating, drinking, or smoking. These organisational measures significantly reduce exposure to carcinogenic substances.

## **P = Personal**

When substitution isn't possible, and measures fall short, use personal protection to shield lungs and skin from carcinogens.
